

# Biosimulation Project

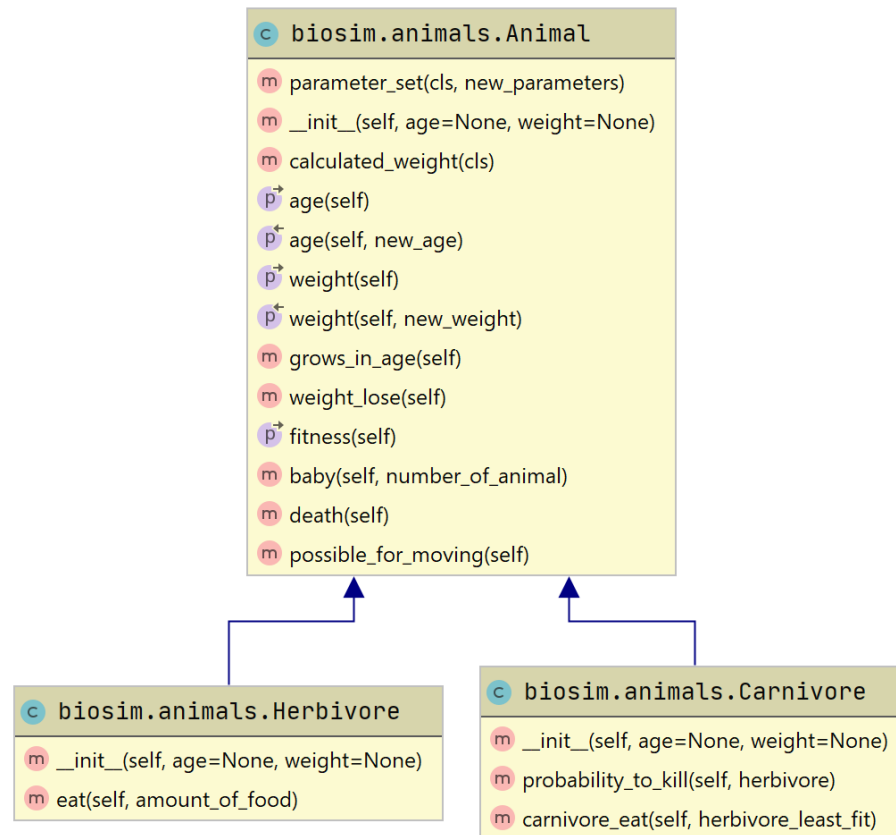

By Anish Thangalingam and Majorann Thevarajah, G30

26/01/2021

# Biosim package

# Animals

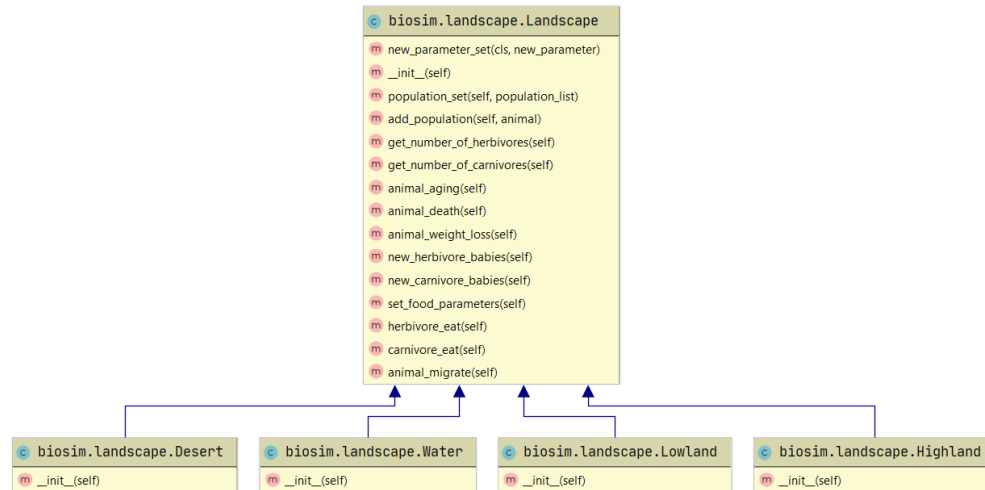

- Main class:
  - Animal
- Two sub classes
  - Herbivore
  - Carnivore

```

def death(self):
    """
    If the weight is 0 than the animal is dead.
    If the weight is greater than 0 than we have to compare
    the death probability against a random number and will return
    the result, either False or True

    :return: True or False
    """
    death_probability = self.parameters["omega"] * (1 - self.fitness)
    if self.weight == 0:
        return True
    else:
        return random.random() < death_probability
  
```

# Landscape

- Main class:
  - Landscape
- Four sub classes
  - Desert, Water, Lowland, Highland
- Flag

```

class Water(Landscape):
    """
    Water class is a subclass to the Landscape class
    flag is False, since animals can not move on water
    """
    parameters = {"f_max": 0}
    flag = False
  
```

# Test coverage

- 4 test scripts
  - Test\_animals.py
  - Test\_landscape.py
  - Test\_island.py
  - Test\_biosim\_interface
- 64 tests
- Covering all the major parts
- Secure and trustworthy

Coverage: [pytest in tests](#) ×

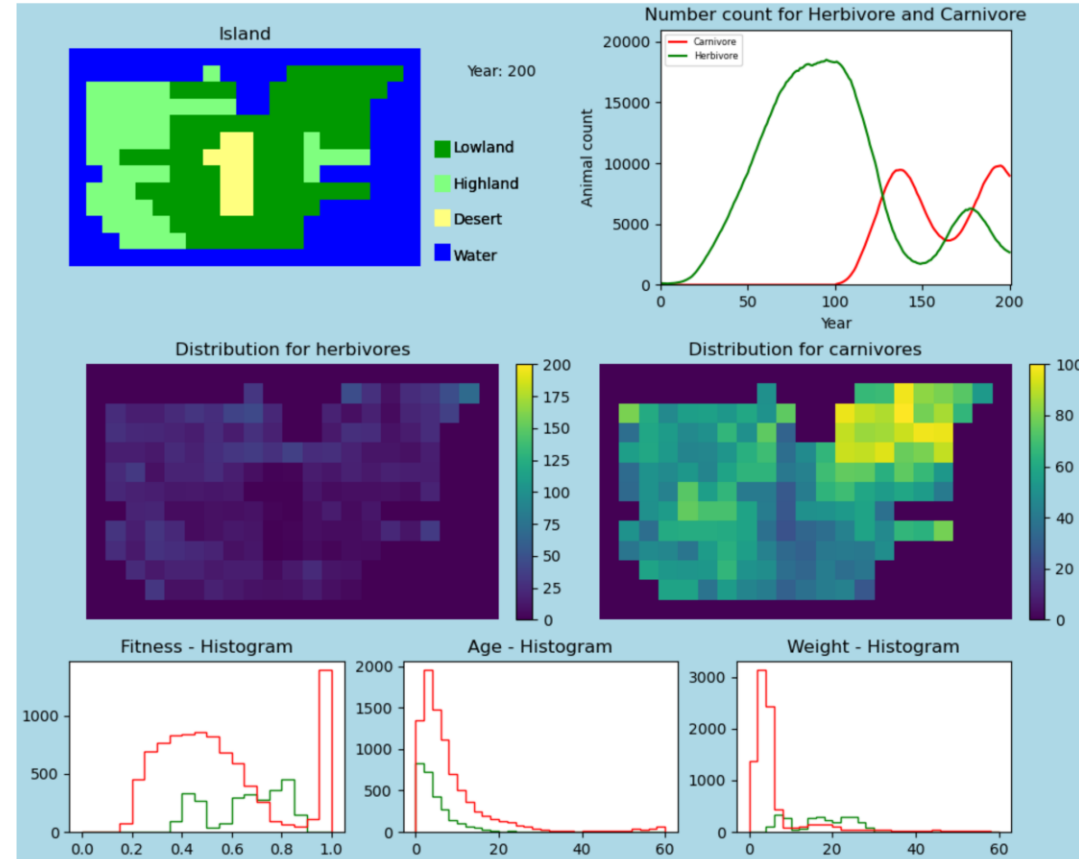

100% files, 95% lines covered in 'biosim'

Element	Statistics, %
__init__.py	
animals.py	95% lines covered
island.py	92% lines covered
landscape.py	95% lines covered
simulation.py	90% lines covered
visualization.py	100% lines covered

# Improvements

- Create more test
- Better visualization
- Sphinx
- Insects
- Faster

# The simulation for the next 200 years

Thank you for listening to us!
